WARNING

Failure to follow any considerations and precautions can lead to serious personal injury, death and/or damage your product.

Failure to follow any considerations and precautions will render all warranties given by Sleipner Motor as VOID.

MC_0411

General Operation Consideration and Precaution Guidelines

MC_0444

MC_0418

For the operation of Sleipner thrusters systems:

- · When not in use or when leaving the boat, turn the control device off.
- When leaving the boat, always turn off the main power switch for the thruster.
- · Never run the thruster while out of water.
- Stop running the thruster and turn it off if the thruster stops giving thrust while running. Running the thruster for more than a few seconds without resistance from the propeller can cause severe damage to the thruster drive components.
- The thruster will not run if two conflicting directions are input in two control panels simultaneously.
- If you notice any faults with the thruster, switch it off to avoid further damage.
- The purpose of the thruster is to manoeuvre or dock the vessel. Forward or reverse speed must not exceed 4 knots when operated.

WARNING

Never use thrusters close to objects, persons, or animals in the water. The thruster will draw objects into the tunnel, as well as the rotating propellers. Contact with the rotating propellers will cause severe injuries and damage to the thruster.

Turn off the main power switch before touching any part of the thruster. An incidental start while touching moving parts can cause serious injuries.

Always plan on how to avoid damage to persons or other objects if the thruster stops giving thrust for while manoeuvring.

For the operation of electric thrusters

MC_0004

- Know the location of the main battery switch, which disconnects the thruster from all power sources (batteries) in case of serious malfunction.
- Keep the main engine running while using the thruster to keep the batteries in a reasonable charge condition and give the thruster the expected
 performance defined.
- The electric motor, components, contacts/ plugs or other joints in the control cables must be mounted to remain dry.
- · Any loose items near the thruster motor can cause problems with electrical wiring coming loose and short-circuiting.

CAUTION

Never store items (e.g. equipment, sails, ropes etc.) in the same compartment as the thruster. When the thruster runs for an extended period, it can reach high temperatures and will cause damage to nearby items or cause a fire.

For the operation of DC electric motors

MC_0419

- The DC electric motor will generate some carbon dust during operation. Ensure any storage compartments are separated from the thruster area to prevent nearby items from becoming dusty.
- The maximum continuous run time of the electrical thruster is approximately 3 minutes. The electrical motor includes a built-in thermal cut off switch that will shut down the motor when it detects overheating. Consider this when planning your manoeuvring.

For Ignition Protected systems:

MC_0007

CAUTION

NEVER Disassemble any part of the Ignition Protected assembly. Tampering with the Ignition Protected assembly will cause it to lose this safety feature. If there is a problem with your Ignition Protected motor, please contact your dealer.

WARNING

Accidental activation of the retract mechanism can cause serious injury due to the high-pressure force used for closing the hatch. IF operating the hatch during any work/ maintenance around or inside the retract hatch, USE CAUTION.

User Operation

! Please refer to the graphic for special considerations relating to your model!

The following is an operation guide to ALL Sleipner control products. Ensure to familiarise yourself with the functionality and operation of your specific control device.

WARNING

Take time to practice operation in open water to become familiar with the thruster and to avoid damages to your boat or people.

General operation

- 1. Turn on the main power switch for the bow thruster. (NB: Always turn off the main power switch when not on-board.)
- Turn on the control panel by pushing the/ both "ON" button(s) on the original Sleipner panel simultaneously. Turn off the control panel by pushing the "OFF" button
- 3. To turn the bow/ stern in the desired direction:

Button control panels

For button control, push the button in the corresponding direction you wish the bow/ stern to move.

Joystick control panels

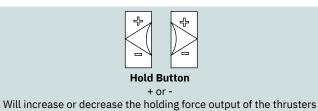

For joystick control, move the joystick in the direction you wish the bow/ stern to move.

(NB: If equipped for proportional control move the joystick equivalent to the amount of thrust you intend to receive.)

For other controls like foot switches or toggle-switches please refer to that products user manual for detailed operational use.

Hold functionality

If equipped with 'hold' functionality push the button in the corresponding direction you wish the thrusters to engage a holding pattern:

Operating a combined bow and stern thruster

The combination of a bow and stern thruster offers total manoeuvrability to move the bow and the stern separately from each other or in unison. This enables the boat to move sideways in both directions or turn the boat around a 360° axis while staying stationary.

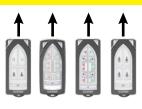

Remote controls

CAUTION

The remote control design reflects the vessel for orientation guidance. Be aware of the remote control orientation during operation.

Remote control orientated

Drift

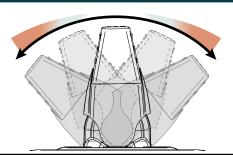

Depending on the sideways speed of the bow/ stern, you must disengage the control device shortly before the vessel is in the desired position. (NB: Be aware the boat will continue to move after disengaging the thruster control.)

CAUTION

At any significant cruising speed (+1-2 kn) the side thruster will have little effect to steer the vessel.

Proportional Control

Variable thrust power for proportional thrusters is dependent on the extent of the joystick/ throttle.

For minimal thrust slightly move the joystick/ throttle in one direction.

For maximum thrust move the joystick/ throttle to its end point.

MG_0394

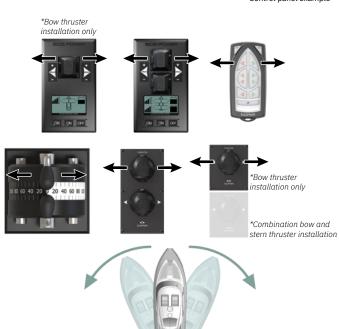

2025

Proportional Control Panel

Activating the bow thruster

Using your control device/ panel press the button or move the joystick in the direction you intend to turn the boat. Ensure to use the control device/ panel designated for the bow thruster.

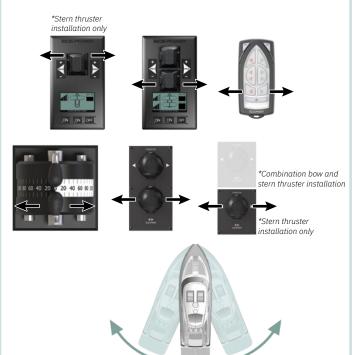

*Control panel example

Activating the stern thruster

Using your control device/ panel press the button or move the joystick in the direction you intend to turn the boat. Ensure to use the control device/ panel designated for the stern thruster.

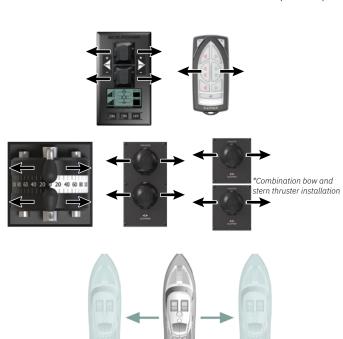

*Control panel example

Activating full sidewards maneuverer

Using your control device/ panel press both buttons or move the joysticks in the same direction you intend to move the boat. Requires both a bow and stern thruster to perform.

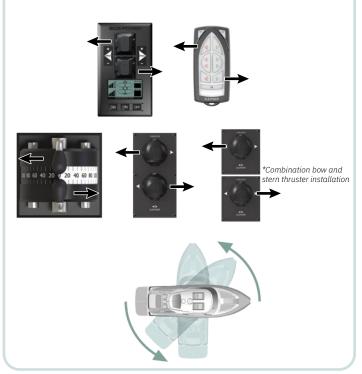

*Control panel example

Activating stationary spin to rotate the boat on its axis

Using your control device/ panel press both buttons or move the joysticks in opposing directions. Requires both a bow and stern thruster to perform.

*Control panel example

For additional information on your control panel or device refer to your control devices user manual

- 6

! Please refer to the graphic for special considerations relating to your model!

As a part of the seasonal service of your Thruster perform these maintenance checks while the vessel is in these circumstances:

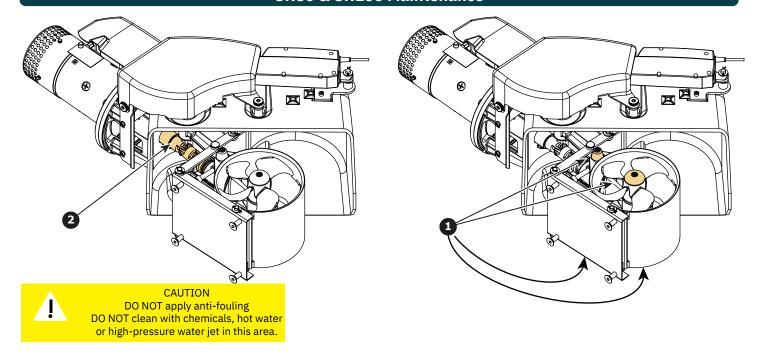

In Water mainenance

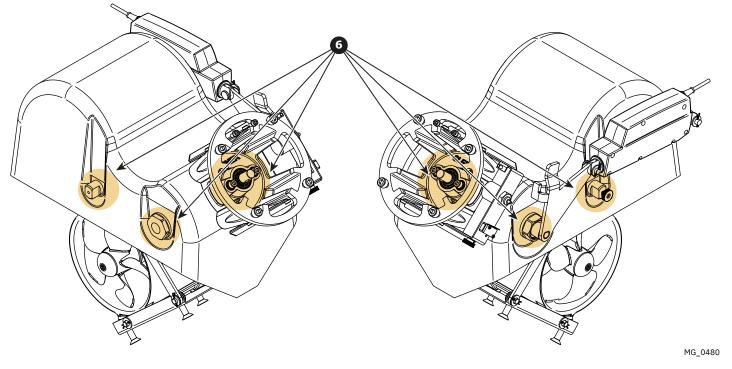

- · The area around cables inside the boat are clean and dry. Ensure there are no signs of water leakage in the area.
- All electrical connections are clean and fastened firmly.
- · Ensure that your batteries are in good condition.
- Bolts holding the thruster components together are fastened securely.
- Check for leaks, see **Reference 6** for actual leak areas.

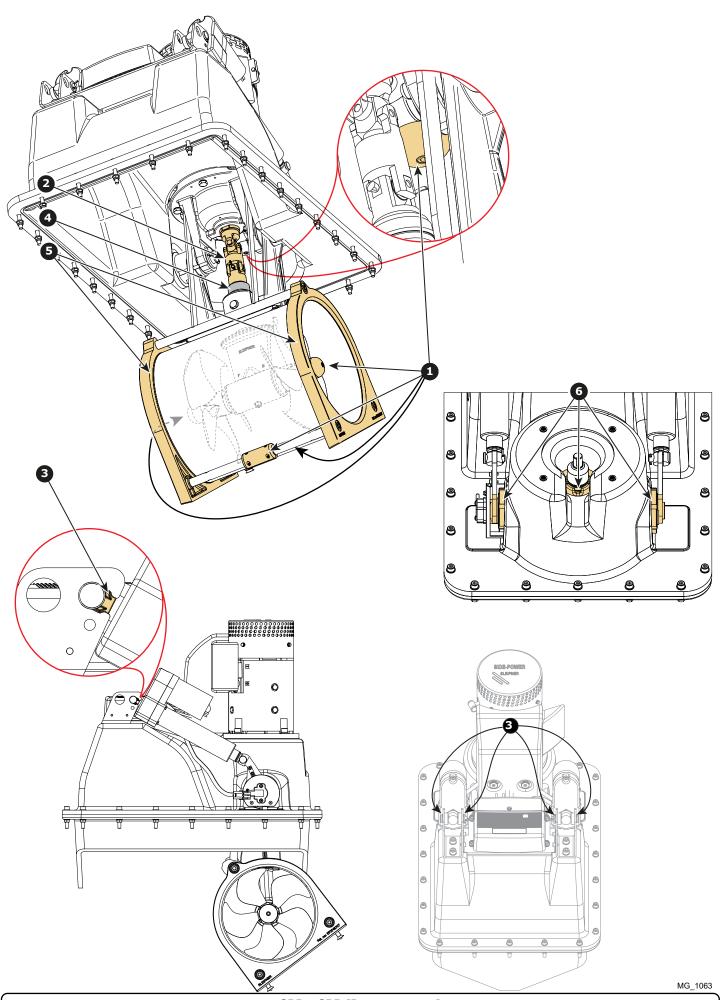

Out of Water maintenance

- Check the propeller(s) or tunnel for any damage for example impact damage.
- The propeller(s) is fastened securely to the gear leg.
- Paint the propeller and gear leg with anti-fouling before every season to keep it clean from sea growth.
 (NB: Never paint the anode, sealing or propeller shaft. Ensure paint does not enter the space between the propeller and the gear leg.)
- Change the anode(s) before every season, or when half the anode has corroded. Always use a sealant or thread glue on the holding screw to ensure that it does not fall off. (**Reference 1**).
- Check the drive shaft in the retract mechanism is lubricated and for any excess movement. (Reference 2).
- *(Excluding SR80 & SR100 models)
 Check for excess movement in the break-away rings securing the actuator. If the actuator can be moved more than 3 mm via manual force, replace the break-away rings. (Reference 3).
 (NB: Spare rings are included from the factory and must be kept on-board.)
- *(Excluding 300mm models)
 Check Rubber element for leakages or cracks every year and change every 2nd year. (Reference 4).
- *(Excluding SR80 & SR100 models)
 Check twist rings for cracks or other damage. (Reference 5).
- Check the hatch is firmly secured and for no excess movement.

SR80 & SR100 Maintenance

8 **SRP & SRP-IP user manual** 5923 - 6 2025

Basic Troubleshooting

Before seeking assistance from the website help desk from your Sleipner dealer/ distributor, please perform these tests. (NB: If you are unable to understand or perform these checks, you must consult a Sleipner distributor.)

| СНЕСК | SOLUTION |
|---|--|
| The motor runs, but there is no thrust | |
| Check propellers are fitted, fastened correctly and there is no damage to the prop shaft. | Re-fasten or replace if necessary |
| *Check the flexible coupling between the motor and drive shaft is fitted correctly and not damaged. | Replace if necessary |
| * Check the gear leg is not damaged. | Replace if necessary |
| The thrusters performance is reduced | |
| Check the propeller, gear house and tunnel are free from growth/ barnacles or debris and damage. | Remove growth and clean. (NB: If there is obstruction in the tunnel it will disturb/ block the water flow and significantly reduce performance.) |
| Check the battery is in a good working condition. (For DC systems only). | (NB: Keep the main engine(s) running in use to have a continuous charge to the batteries) Check batteries are not worn out or in a bad charged condition Check electrical connections/ wiring for damage or wear (corrosion) Check cables are the correct size per the product manual Tighten/ re-adjust connections |
| The thruster does not start/ works in only one direction | or does not turn off |
| Check the main switch is active/ on. | Open the main switch if it is closed. |
| Check all battery fuses are in good condition. | Check batteries Check electrical connections/ wiring for damage or wear (corrosion) Tighten/ re-adjust and clean connections |
| The thruster is not shutting off after the Joy Stick/ panel is disengaged. | Hit the main switch to disengage the thruster. Contact and consult a Sleipner distributor as the control system has been damaged. |
| The thruster works in only one direction | |
| Damaged relay. | Hit the main switch to disengage the thruster. Contact and consult a Sleipner distributor as the control system has been damaged. |
| The thruster runs in a pulsing action | |
| This is a build-in error response. -Solenoids failure | Hit the main switch to disengage the thruster. Contact and consult a Sleipner distributor. |
| The solenoid might be in a lock-in/ auto stop position. | Hit the main switch to disengage the thruster. Contact and consult a Sleipner distributor. |

Sleipner Group Waste Disposal and Recycling Guide

MC_0848

Introduction:

At Sleipner Group, we prioritize sustainability and encourage the repair and re-manufacturing of products to extend their life cycles. If disposal is necessary, please follow these guidelines to recycle and manage waste responsibly, ensuring our efforts align with environmental protection efforts.

Electric Motors and Electronics:

- Disconnect from any power sources and dismantle them carefully.
- · Recycle components through certified e-waste recycling centers that can adequately handle and recover electronic materials.
- Dispose of any non-recyclable electronic parts according to local environmental regulations.

Metals:

- Collect and sort metal parts for recycling as scrap metal.
- To increase recycling efficiency, ensure that metals are clean and free from non-metal attachments.

Plastics:

- Identify recyclable plastics based on local recycling guidelines.
- Remove any non-plastic components and clean them before recycling to improve the quality of the recycled material.

Hazardous Materials:

- · Correctly identify any hazardous substances within components, such as batteries or capacitors etc.
- · Follow local regulations for the safe disposal of hazardous materials to prevent pollution and protect environmental health.

General Disposal Instructions:

- · Consult local recycling programs to determine the acceptability of various materials.
- Use authorized disposal services to ensure compliance with environmental standards.

Safe Disposal Practices:

· Adhere to local laws and regulations for waste management to minimize environmental impact and ensure community safety.

This guide is designed to help reduce our products' environmental footprint through responsible end-of-life management. Please contact your local waste management supplier or our support team for more specific disposal information or further assistance.

Warranty statement

MC_0024

- Sleipner Motor AS (The "Warrantor") warrants that the equipment (parts, materials, and embedded software of products) manufactured by the Warrantor is free from defects in workmanship and materials for purpose for which the equipment is intended and under normal use and maintenance service (the "Warranty").
- 2. This Warranty is in effect for two years (Leisure Use) or one year (Commercial and other Non-leisure Use) from the date of delivery/purchase by the end user, with the following exceptions;
 - (a) For demonstration vessels, or vessels kept on the water, the dealer is considered as the end user from 6 months after their launch of the vessel;
 - (b) The warranty period starts no later than 18 months after the first launch of the vessel.
 - Please note that the boat manufacturer and dealer must pay particular attention to correct maintenance and service both by the products manuals as well as general good practice for the location the boat is kept in the period the boat is in their care. In cases where the 6 and 18 months grace periods for boat builders and dealers are passed, it is possible to obtain a full warranty upon inspection and approval of the warrantor or such representative.
- 3. Certain parts, classified as wearable or service parts, are not covered by the warranty. A failure to follow the required maintenance and service work as described in the product manual render all warranty on parts or components directly or indirectly affected by this void. Please also note that for some parts, time is also a factor separately from actual operational hours.
- 4. This Warranty is transferable and covers the equipment for the specified warranty period.
- 5. The warranty does not apply to defects or damages caused by faulty installation or hook-up, abuse or misuse of the equipment including exposure to excessive heat, salt or fresh water spray, or water immersion except for equipment specifically designed as waterproof.
- 6. In case the equipment seems to be defective, the warranty holder (the "Claimant") must do the following to make a claim:

 (a) Contact the dealer or service centre where the equipment was purchased and make the claim. Alternatively, the Claimant can make the claim to a dealer or service centre found at www.sleipnergroup.com. The Claimant must present a detailed written statement of the nature and circumstances of the defect, to the best of the Claimant's knowledge, including product identification and serial nbr., the date and place of purchase and the name and address of the installer. Proof of purchase date should be included with the claim, to verify that the warranty period has not expired:
 - (b) Make the equipment available for troubleshooting and repair, with direct and workable access, including dismantling of furnishings or similar, if any, either at the premises of the Warrantor or an authorised service representative approved by the Warrantor. Equipment can only be returned to the Warrantor or an authorised service representative for repair following a pre-approval by the Warrantor's Help Desk and if so, with the Return Authorisation Number visible postage/shipping prepaid and at the expense of the Claimant.
- 7. Examination and handling of the warranty claim:
 - (a) If upon the Warrantor's or authorised service Representative's examination, the defect is determined to result from defective material or workmanship in the warranty period, the equipment will be repaired or replaced at the Warrantor's option without charge, and returned to the Purchaser at the Warrantor's expense. If, on the other hand, the claim is determined to result from circumstances such as described in section 4 above or a result of wear and tear exceeding that for which the equipment is intended (e.g. commercial use of equipment intended for leisure use), the costs for the troubleshooting and repair shall be borne by the Claimant;
 - (b) No refund of the purchase price will be granted to the Claimant, unless the Warrantor is unable to remedy the defect after having a reasonable number of opportunities to do so. In the event that attempts to remedy the defect have failed, the Claimant may claim a refund of the purchase price, provided that the Claimant submits a statement in writing from a professional boating equipment supplier that the installation instructions of the Installation and Operation Manual have been complied with and that the defect remains.
- 8. Warranty service shall be performed only by the Warrantor, or an authorised service representative, and any attempt to remedy the defect by anyone else shall render this warranty void.
- 9. No other warranty is given beyond those described above, implied or otherwise, including any implied warranty of merchantability, fitness for a particular purpose other than the purpose for which the equipment is intended, and any other obligations on the part of the Warrantor or its employees and representatives.
- 10. There shall be no responsibility or liability whatsoever on the part of the Warrantor or its employees and representatives based on this Warranty for injury to any person or persons, or damage to property, loss of income or profit, or any other incidental, consequential or resulting damage or cost claimed to have been incurred through the use or sale of the equipment, including any possible failure or malfunction of the equipment or damages arising from collision with other vessels or objects.
- 11. This warranty gives you specific legal rights, and you may also have other rights which vary from country to country.
